EDUCATION

The George Washington University **Washington, DC**
Bachelor of Science in Computer Engineering **May 2025**

- **Relevant Coursework:** Digital Signal Processing; Computer Organization; Software Engineering; Digital Electronics, Digital Design with FPGAs, Analog Electronics Design, Computer Networks, Embedded Systems, Computer Architecture, VLSI Design.

TECHNICAL SKILLS

- **Programming Languages**: C, HTML, SQL, JavaScript, Python, Java, Verilog, React, ThreeJS, Tailwind CSS.
- **Operating Systems**: Windows, Linux, MAC OS, Raspbian (Raspberry Pi).
- **Software**: MS Office, Cadence, MATLAB, NI Multisim, VMWare, Microsoft Teams, GitHub, Wireshark, Vivado.
- **Laboratory/Mechanical and Other Equipment**: Digital Power Supplies, Circuit Boards, Waveform Generators, Oscilloscopes, Soldering, Multimeters.

EXPERIENCE

The George Washington University **Washington, DC**
Technical Support Assistant II **August 2022 - Present**

- Resolved over 100 technical issues across campus, achieving prompt and seamless operations, and maintaining high user satisfaction levels through university ticketing system.
- Spearheaded implementation of testing network protocols, reducing software and hardware troubleshooting resolution time by 30% and saving team 20+ hours per week.

Connected DMV **Washington, DC**
Project Lead **December 2023 - September 2024**

- Led the development of a website and networked community tailored for high school students in the Greater Washington area, providing educational resources and interactive discussions on quantum science and technology.
- Managed the project timeline over a 4-month period, coordinating tasks, setting milestones, and aligning team efforts for content development, user interface design, and technical infrastructure, while staying within budget.
- **Accomplishment:** Launched a test version of the platform in July for student validation, with a full release (Version 1.0) version presented at the Quantum World Congress, September 2024.

TECHNICAL PROJECTS

AI Backpack Assistant **Washington, DC**
Personal Project **May 2023 - October 2023**

- Allowed users to execute commands, inquire information, and charge mobile devices seamlessly.
- Developed a responsive system to deliver a clear, synthetic voice feedback by integrating text-to-speech services; customized to process and respond to user commands accurately.
- Equipped assistant with a microprocessor hosts the OpenAI Python program and drives sound through an audio amplifier.

State Machine **Washington, DC**
Solo Lab Project Lead **March 2023 - May 2023**

- Engineered with 4 distinct states (A-D), each displaying the numbers 1,2,3, and 4 on corresponding anodes.
- Implemented an interactive feature where holding the enable button triggers a synchronized flash of all numbers, seamlessly advancing to the next state upon release.
- Utilized the Diligent Basys 3 Board and Verilog software to design and execute the project.

Audio Amplifier **Washington, DC**
Team Project **January 2023 - May 2023**

- Constructed a class AB (push-pull) amplifier implementing Darlington Configuration.
- Designed a bridge rectifier to convert AC to DC, ensuring a stable power supply for the amplifier.
- Directed the team in testing the amplifier's output power, verifying design specifications were met and ensuring optimal performance.

ADDITIONAL INFORMATION

- **Leadership Roles:** Project Manager, GW Robotics Club (February 2023-Present); Director of Technology, Engineers' Philanthropic Society (October 2023-Present).
